Sustainable Construction and Building Materials

Select Proceedings of ICSCBM 2018

Series: Lecture Notes in Civil Engineering

- Presents selected papers from the International Conference on Sustainable Construction and Building Materials (ICSCBM 2018)
- Highlights the use of industrial wastes and byproducts to make energy-efficient and eco-friendly building materials
- Discusses non-conventional materials to novel concrete features such as high strength, light weight, high performance, and self-compacting

This book presents select proceedings of the International Conference on Sustainable Construction and Building Materials (ICSCBM 2018), and examines a range of durable, energy-efficient, and next-generation construction and building materials produced from industrial wastes and byproducts. The topics covered include alternative, eco-friendly construction and building materials, next-generation concretes, energy efficiency in construction, and sustainability in construction project management. The book also discusses various properties and performance attributes of modern-age concretes including their durability, workability, and carbon footprint. As such, it offers a valuable reference for beginners, researchers, and professionals interested in sustainable construction and allied fields.
